How I work

Role: Staff Product Designer with 10 years of experience, now at JumpCloud, setting direction for Platform, Commands and Authentication, including the Slack app and the chat framework reused by seven product areas.

With the team: I lead a group of designers, moving between hands-on work and managing as each project needs. I mentor new designers and teach other teams, like the technical writers, to work in Cursor, Git and Storybook.

My approach: Start from research and the admin's real workflow. Build shared frameworks and Circuit components so teams do not start over. Prototype early with AI.

Experience

Jumpcloud | Staff Product Designer

Jan 2024 - Present

• Designed JumpCloud's Slack app end to end: notification channel connector, alert and Access request message templates, and a Channel ID validation modal. Shipped GA in March 2026 after a 2-week design sprint; live in 326 orgs, peaking at 200+ notification events a day.

• Led Workflows design from a hackathon idea to GA: 232 orgs running it (up from 93) and 1,830 workflows built, answering about $2M MRR of customer demand.

• Lead design for Platform, Commands and Authentication across a group of designers, working hands-on or managing depending on what each project needs.

• Built the chat and card framework (Slack message schemas, webhooks) that other designers adopt instead of starting over; reused by seven product areas: Access requests, Commands, Access certifications, Workflows, Connectors, SaaS management and Asset management.

• Own multi-platform component libraries and tokens on the Circuit Design System, partnering with PMs and engineers on production-ready handoff and raising craft through design reviews.

• Enable other teams: taught the technical writers Cursor, Git and Storybook (recognized in a Slack shout-out); onboarded and mentored new designers.

• Ran formal research for Alerts V2 and analyzed Gong recordings of admin workflows and conditional access to shape product decisions.

• Integrate AI into established products, prototype with vibe-coding tools (Claude Code, Storybook) and lead AI adoption across UX.

Microsoft | Product Designer

Jan 2021 - July 2023

Led 0-1 mobile design for the Defender consumer security app, and built a mobile platform framework that sped up development.

Pramati Technologies | Interaction Designer

Mar 2019 - Jan 2021

Created an API design platform and formalized research practice, speeding up API development.

Baladharshan B Staff Product Designer

Earlier experience

Cognizant | Designer(Program Analyst)

Dec 2016 - Sep 2018

Foundational form designs on AEM.

Skills

Leadership: Leading and mentoring designers · Setting design direction · Cross-team alignment and enablement

Design: Design systems · Tokens and variables · Typography, color and spacing standards · Usage guidelines · Cross-platform patterns

Collaboration: Design critique and reviews · Engineering handoff · Cross-team alignment · Pitching new concepts

Research: Journey mapping · Competitive analysis · Heuristic evaluation · Usability evaluation

Prototyping: Cursor, Claude Code and Skills, Storybook, Figma Make, vibe-coding tools

Motion: After Effects, Figma Motion

Selected work

- Workflows: from API calls to a visual builder. Research, builder design and the Workflows Assistant (build by asking).
- Protect, TOTP cloud backup: restore authenticator codes on a new phone, designed for iPhone and Android.
- Platform: Access Requests in Slack, Alerts V2, Webhooks and Conditional access.

Education

Anna University

May 2016 | Coimbatore,India

Bachelor of Information Technology

Recognition

The Crafty Nook and AI Mystic Makers, awarded at the End of Year Team Event and voted by my design peers.
